1. What LogicClass is

LogicClass is one application that covers a school day end to end: enrolment and student records, attendance, coursework and grades, fees and payments, printed records and forms, the class timetable, reports, emergencies, and the data-protection paperwork a school is asked for.

It is not nine applications with one brand on them. There is one login. Each account carries a role, and the app opens on the portal for that role. Nobody chooses a mode, nobody sees a screen that is not theirs, and nothing has to be copied from one part of the school to another - a mark a teacher submits is the same record a parent reads, and a payment a cashier records is the same figure that moves a balance.

Who supervises and who operates

Two of the ten roles read the school without changing it. A Director runs the school and a Principal runs a division, and both of them are oversight: they open every screen they are entitled to, and the buttons that add, edit or delete are not offered to them. Everything the school changes week to week - enrolling a student, charging a fee, moving stock, building the timetable, setting what somebody is paid - is the Admin's.

They keep four things, because each is a decision rather than data entry: deciding an approval request, posting an announcement under their own name, and calling a meeting. A Director or Principal can also pick up an emergency alert, and the first one to do so is the one the record names.

This is enforced in the database rules, not only in the app. A supervisor is never shown a form that the server would then refuse.

What this guide covers

Every portal, every screen, and every button on it. Where a button leads somewhere with its own buttons, that screen has its own table. Cross-cutting features - attendance, fees, records and forms, schedules, reports, emergencies, importing and exporting - are described once in full, in sections 13 to 21, and referred to from each portal that uses them.

The school day it replaces

- A class record, a registrar's ledger, a cashier's receipt book, a guidance file and an adviser's notebook - each holding part of one student.
- Attendance called in the morning, written on a slip, and typed into a spreadsheet at the end of the week.
- A balance the cashier and the family remember differently, settled only by finding the receipts.
- A Form 137 request that takes days, and no record that the document was ever released.
- A family that learns about a fever, a suspension or a summons when the child gets home.

- A grade that moves, a balance that is edited, a record that disappears - and no way to say who did it.

2. The nine portals at a glance

One school runs all nine. An account belongs to exactly one of them.

Portal	For	What it covers
Director	School-wide oversight	Reads everything in the school - today's figures, fee schedules, expenses, payroll, leave, reports, the audit trail - and changes four things: announcements, meetings, approvals, and picking up an emergency alert. Editing the school's records is the Admin's.
Principal	One division, oversight only	Reads student records, the class schedule, teacher assignments and the leave queue for their division; decides approvals, posts announcements, calls meetings, picks up an emergency alert. No edit buttons on the records themselves.
Admin	School operations - the operator	Employee accounts, teacher assignment, strands and programs, branding, schedules, fee schedules, receipt booklets, expenses, payroll, inventory, reports, audit trail, attendance scanning, leave requests and staff timesheets. Everything the school changes week to week.
Registrar / Cashier	The front counter	Enrolment, student records, fee assessment, payments and receipts, printed forms, online-payment review and setup.
Faculty	Teaching	Own timetable, class registers with time in and out, coursework, answer keys, submissions, grade submission, material requests, attendance scanning, messages with parents, own leave and timesheet.
Guidance	Student welfare	Guidance records, student summons, emergency alerts.
Staff	Non-teaching staff	Daily checklist, daily work reports, material requests, own scannable ID, own leave and timesheet.

Portal	For	What it covers
Student	The learner	Subjects, timetable, coursework, grades, attendance, balance, promissory note, emergency button, announcements, QR ID.
Parent	The family	Each linked child's attendance - by day and by subject - timetable, grades and statement of account; messages with their teachers; emergency alerts; announcements; online payment.

Roles that can be scoped to a division - Principal, Registrar, Faculty, Guidance - see only that division's records. The limit is enforced by the database, not by hiding buttons.

3. What every portal shares

3.1 Signing in

Control	Opens	What happens
Email and password	The portal for your role	One field each, and a show-password toggle. There is no role picker: the account decides where you land.
Remember me	Sign in	Stores the email so the next sign-in only needs a password. The box comes back ticked with the field filled in; unticking it forgets, which is how a shared front-desk computer is cleared. No password is stored, on any platform, under any setting.
Show password	Sign in	Reveals what has been typed. On every password field in the app, not only this one.
Forgot password?	Reset password	Enter the account email and a reset link is sent.
First sign-in	Update password	An account created with a temporary password must set its own before it can go anywhere.
First use	Before you start	The privacy notice, then the terms of use, in that order - told what is held about you before being asked to agree to anything. Each must be read to the end before its button becomes available, and the version of each is recorded against the account.
I do not accept	Sign out	The terms can be declined, and declining signs you out. The account is untouched and the page comes back next time. The privacy notice has no equivalent: a notice is given, an agreement is entered into.

3.2 Profile - on every portal's top bar

Button	Opens	What you can do there
Profile	Your own record	See your name, role and email; edit your phone number and photo. Role, status and school cannot be changed here by anyone, including you.

Button	Opens	What you can do there
My QR ID	Your school ID	The card that identifies you to a scanner. Printable, and usable straight from the screen.
Privacy and my information	Privacy notice	What the school holds, why, and who sees it - plus the button to ask about your own information.
My Activity History	Your own audit trail	Every action you have taken in the system, most recent first.
My Attendance	Your attendance	Every time you were scanned, in and out.
Emergency Numbers	The school's numbers	The published list, one tap to dial.
Announcements on this device	Notification switch	Turn push notifications for this phone or computer on or off.

4. Director Portal

The Director dashboard opens on four figures for today - the attendance rate, what has been collected, how many approvals are waiting, and the meetings coming up - read at the moment the screen is opened rather than from an overnight job.

4.1 The dashboard buttons

Button	Opens	What you can do there
Announcements	Announcements	Write a title and message, address it to everyone or pick the roles it is for, and pin one to the top. Posting it notifies the phones of everyone addressed.
Meeting Scheduler	Meeting Scheduler	Schedule a meeting with a title, description, location, start and end, and the roles expected. Cancel one that is no longer happening.
Approvals	Approvals	One inbox for every request filed anywhere in the school - material requests from faculty and staff, promissory notes from students. Filter by pending, approved, rejected or all; approve or reject with a reason. Each card carries the request's own details, and each decision records who made it. See 4.2.
Class Schedule	Class Schedule	The week for every section. See section 17.
System Check	System Check	Seven readiness checks. See section 25.
Reports	Reports	The four school reports, on screen, to Excel, or printed. See section 18.
Fee Schedules	Fee Schedules	Define the named fee sets the cashier assesses against. See section 14.
Expenses	Expenses	Record school spending with a category, description, amount, date and the receipt behind it - or import a spreadsheet of it. Financial data: readable by Director, Admin and Registrar only.
Emergency Numbers	Emergency Numbers	Publish the numbers every portal can dial, with who answers, the number, a note and the order they appear in.

Button	Opens	What you can do there
Audit Trail	Audit Trail	Every change made in the school, filterable by module and date range, searchable by person or remark.
My Activity	My Activity History	The same trail, narrowed to your own actions.
Profile	Profile	As section 3.2.

Nobody decides their own request - not the Director, not the Principal, not the Admin. The rule that files a request and the rule that decides one are deliberately separate, and the database refuses a self-decision whatever the screen offers. That separation is the whole reason deciding approvals stayed with the Director and the Principal when everything else operational moved to the Admin: somebody has to be able to decide what the Admin filed.

4.2 What an approval records

A request card shows what is being decided, not only its title. The details a request carries - a quantity and an estimated cost for a material request, an amount and a reason for a promissory note - are laid out on the card, so nobody approves on a title alone and nobody reading it back months later has to guess what was agreed to.

What is shown	Where	What it tells you
Filed by	Every card	The name and role of whoever raised it, and the date and time.
The request's details	Every card	Whatever that kind of request carries. The field is free-form - a material request and a promissory note file into the same inbox - so the card lays out the values it finds.
Approved / Declined by	A decided card	The name and role of the account that decided it.
Date and time	A decided card	When the decision was made.
Reason	A decided card	What the decider wrote, on an approval as well as a refusal.
Pending / Approved / Rejected / All	Filter chips	The history, filtered. "All" is the full record of everything ever filed.

The decision is signed by the account that made it: the rules require the deciding account's own id and role on the write, so an approval cannot be attributed to somebody else. A history that can be authored is not a history.

5. Principal Portal

A Principal is a division-level academic leader - Elementary, Junior High, Senior High or College. Their scope is set on their employee record, and every record they can open stops at that line. The role is oversight rather than data entry: grades stay with the teacher who submitted them, and student records stay with the registrar.

Button	Opens	What you can do there
Student Records	Student Records	Search and filter the roster within their division, and open any record in it - read only.
Class Schedule	Class Schedule	The week as it is actually timetabled, section by section.
Teacher Assignment	Teacher Assignment	Who teaches which subject in which section this school year, and who advises the section.
Emergency Alerts	Emergency Alerts	Live alerts raised in the school, with the ability to resolve one.
Emergency Numbers	Emergency Numbers	The published numbers, one tap to dial.
Announcements	Announcements	Post school or division messages under their own name, and pin one.
Meeting Scheduler	Meeting Scheduler	Call a meeting and say who it is for.
Approvals	Approvals	Decide the requests that reach a division head.
Profile	Profile	As section 3.2.

5.1 What a Principal deliberately cannot do

Action	Availability	Why
Edit student records	Not available	Records editing stays the registrar's job.
Create or edit grades	Not available	Grading stays faculty-authored.
Write guidance records	Not available	Counselling notes stay a guidance office action; a Principal may read them for their division.

Action	Availability	Why
Read payments	Not available	Financial data stays with Director, Admin and Registrar - the same separation drawn for expenses.

6. Admin Portal

The operator role: the account that keeps the school configured week to week.

6.1 The dashboard buttons

Button	Opens	What you can do there
Employee Management	Employee Management	The staff list, filterable by role and by suspended status. Create an account for any role with first and last name, email, department, position and data-access scope. Export the list or import one from a spreadsheet.
Teacher Assignment	Teacher Assignment	Assign a teacher to a subject, section and school year, and mark one as the class adviser. Import or export the whole set.
Strands & Programs	Strands & Programs	The Senior High strands and college degree programs students enrol into, each with a code. Elementary and Junior High have no catalogue entry - their grade level and section say everything the record needs.
Emergency Alerts	Emergency Alerts	See and resolve alerts raised anywhere in the school.
Emergency Numbers	Emergency Numbers	Publish the numbers every portal can dial.
Class Schedule	Class Schedule	Build the week. See section 17.
System Check	System Check	Seven readiness checks. See section 25.
Reports	Reports	The four school reports. See section 18.
Fee Schedules	Fee Schedules	Define fee sets. See section 14.
Announcements	Announcements	Post and pin school messages.
Scan Attendance	Scan Attendance QR	Open the camera and mark whoever is scanned. See section 13.
Audit Trail	Audit Trail	Every change, filterable by module and date.
School Branding	School Branding	The school's printed identity - see 6.3.
Profile	Profile	As section 3.2.

6.2 Inside an employee record

Control	Where	What it does
Department, Position	Employee detail	The HR fields kept against the account.
Assigned Division	Employee detail	Restricts the records this account can read to one division - or leave it unrestricted for a school-wide role.
Assigned College Department	Employee detail	Narrows a college-scoped account further.
Save HR Details	Employee detail	Writes the changes.
Reset Password	Confirmation	Issues a temporary password; the employee is forced to set their own at the next sign-in.
Activate / Suspend	Confirmation	Switches an account off without deleting anything it wrote. An account cannot change its own status, and an Admin cannot suspend a Director.

6.3 School Branding

What the school's printed output looks like. Everything here appears on ID cards, the Transcript of Records, Form 137 and the printed reports.

Field	Where	What it affects
Logo	Branding	Uploaded once; printed on documents and used as the background of the student ID card.
School name (as printed)	Branding	The name as it should appear on paper, which is not always the name in the system.
Address line	Branding	Printed under the name.
School year	Branding	Carried onto documents and used as the default when assessing fees.
Principal name and signature	Branding	An uploaded signature image, printed on IDs and documents.
Director name and signature	Branding	The same, for the school head.
Save	Branding	Applies immediately - new ID cards and documents use it from that moment.

7. Registrar and Cashier Portal

The counter a family actually walks up to. Four tiles on the dashboard; everything else opens from a student's own record.

7.1 The dashboard buttons

Button	Opens	What you can do there
Student Records	Student Records	The roster, searchable and filterable by division, loading more as you scroll. Register a new student, or import and export the whole list.
Online Payments	Online Payments	The review queue of GCash and bank transfers families have sent in. See section 15.
Payment Setup	Online Payment Setup	The school's own account name, number, QR image and the instructions families read. See section 15.
Profile	Profile	As section 3.2.

7.2 Registering a student

Control	Opens	What happens
Register Student	Registration form	First, last and middle name, division, grade level, section or block, birthday, and guardian name and phone. Senior High and College also pick a strand or program from the catalogue.
Register	Confirmation	Issues a sequential student number - S-2026-000001 - generated on the server so two registrations at once can never collide or reuse one. The record starts enrolled, with a zero balance.

7.3 Inside a student record

Button	Opens	What you can do there
Edit	Student detail	Name, grade level, section, status and guardian contacts. The student number, the balance and the link to a portal account cannot be edited here by anyone - they are set by the actions that own them.

Button	Opens	What you can do there
Photo	Upload	The picture that prints on the school ID.
Assess Fees	Assess Fees	Charge a fee schedule against this student, or type an ad-hoc charge line by line. See section 14.
Record Payment	Record Payment	Take a payment with an amount, purpose, method and reference number, with this student's current balance on screen. See section 14.
Payment History	Payment History	Every charge, payment and refund, and a breakdown of how the balance is made up.
Records & Forms	Records & Forms	Print the Transcript of Records or Form 137 and log the release. See section 16.
Attendance History	Attendance History	Every scan for this student, in and out, with the status the server decided.
Create Student Portal Account	Account creation	Issues the student their own login, linked to this record. Shown only while the record has no account - a student record does not need one to exist.
Set Balance	Balance	An opening balance for a student carried over from a previous system.

8. Faculty Portal

8.1 The dashboard buttons

Button	Opens	What you can do there
My Schedule	My Timetable	The teacher's own week - what they teach, when, where and to whom.
Coursework	Coursework	Every lesson plan, lesson, assignment, project, exam and quiz they have set. See 8.2.
Class Record	Class Record	Where a teacher actually keeps grades: a column per piece of work, the class typed down it in one go, and the quarterly grade computed as you save. See 8.5.
Grade Submission	Grade Submission	The older per-student path, kept for a single late mark and for the spreadsheet import. See 8.5.
Material Requests	Material Requests	File a request for what the classroom needs; it lands in the same approvals inbox the Director reads.
Scan Attendance	Scan Attendance QR	Mark a class present by scanning their IDs. See section 13.
Emergency Alerts	Emergency Alerts	Raise or read an alert without leaving the room.
Announcements	Announcements	Post to their own sections, under their own name. A teacher can post as themselves and only as themselves.
Profile	Profile	As section 3.2.

8.2 Coursework

Six kinds of coursework share one screen, distinguished by a type: Lesson Plan, Lesson, Assignment, Project, Exam and Quiz. The first two are instructional material with no due date and no points; the other four are gradable and must carry a due date.

Control	Opens	What you can do
New	Create coursework	Type, title, description, subject, section, due date and total points.

Control	Opens	What you can do
Publish now	Create coursework	Left off, the item saves as a draft visible only to staff - a teacher can prepare an exam without it appearing in a student's feed.
Draft filter	Coursework	Show only what is not yet published.
Answer Key	Answer Key	See 8.3.
Submissions	Submissions	See 8.4.

8.3 Answer key and automatic marking

Control	Where	What it does
Correct answers	Answer Key	One answer per line, in question order.
Marks per question	Answer Key	What each correct answer is worth.
Save key and re-mark	Answer Key	Saves the key and re-marks everything already handed in against it, rather than only future submissions.

8.4 Submissions

Control	Where	What it shows
The summary line	Submissions	How many handed in, how many are outstanding, how many were late.
Open a submission	Mark a student	Read the answers and give a score and written feedback.
Auto-marked badge	Submissions	Shown where the answer key scored it, with the question count.
Late badge	Submissions	Marks work handed in after the due date.

8.5 Grade submission

Control	Where	What it does
Subject and Section	Grade Submission	Pick the class.
Load	Grade Submission	Pulls that section's roster.

Control	Where	What it does
Submit Grade	Grade entry	Student, term, score and maximum score.
Ungraded filter	Grade Submission	Shows only the students still without a mark for the term.
Import / Export	Export / Import Grades	Bring a term's marks in from a spreadsheet, or take the current ones out. See section 20.

A grade can be corrected but never reassigned: an update that would move a mark to a different student is refused by the database, not by the screen.

9. Guidance Portal

Button	Opens	What you can do there
Guidance Records	Guidance Records	Enter a student ID, load their records, and add a note with a category and the note itself. Edit an existing note.
Student Summons	Student Summons	Issue a summons with the student, a reason and a scheduled time. Mark one completed, or cancel it.
Emergency Alerts	Emergency Alerts	Every alert raised in the school, with the ability to resolve one.
Profile	Profile	As section 3.2.

9.1 The privacy line between the two records

These two features look similar and are deliberately governed differently.

Record	Who can read it	Why
Student Summons	Guidance, Director, Admin, the division Principal, the student, and their linked parent	Being called to the guidance office is something a family needs to know about, so it follows the same pattern as attendance, grades and payments.
Guidance Records	Guidance, Director, Admin, and the division Principal	Counselling notes are the most closely held record in the system. Not the class adviser, not the student, not the parent. Written only by Guidance, and by the Admin who administers the school's records.

10. Staff Portal

Button	Opens	What you can do there
Checklist	Today's checklist	A personal task list for the day. Add a task, edit it, tick it off. It is scoped to the person and the date, so it resets rather than piling up.
Daily Reports	Daily Reports	A short end-of-day work log. Submit one; it cannot be edited or deleted afterwards, not even by its author - a correction is a new entry.
Material Requests	Material Requests	The same screen faculty use, filing into the same approvals inbox.
My e-ID	My School ID	The staff member's own scannable ID. Staff are scanned rather than scanning, so what they need at hand is the card, not the camera.
Profile	Profile	As section 3.2.

The daily report is immutable on purpose: a work log is only worth keeping if it is a trustworthy point-in-time record.

11. Student Portal

A student record exists whether or not the school issues that student a login. Where one is issued, this is what it opens.

Button	Opens	What you can do there
Subjects	My Subjects	Every subject the student is enrolled in and who teaches it. Opening one shows what has been posted in it and the marks recorded for it.
My Timetable	My Timetable	The week, day by day, with room and teacher.
Assignments & Exams	Assignments & Exams	The feed of published coursework, filterable by kind. Drafts never appear here.
Open a piece of work	Coursework detail	Read it, answer question by question, and submit. The answer can be changed while the work is still open, and the mark and the teacher's feedback appear here once given.
Grades	My Grades	Marks per subject and term, as the teacher submitted them.
Attendance	My Attendance	Their own record: every scan, in and out.
Payments & Balance	Payment History	What was charged, what was paid, what is left, and the breakdown of how the balance is made up. Read only.
Pay online	Pay Online	Send a fee by GCash or bank transfer and submit the reference for review. See section 15.
Promissory Note	Promissory Note	Ask for an extension with an amount and a reason. It files into the same approvals inbox as every other request.
Emergency	Emergency	One button that alerts the adviser, guidance, the office and the linked parents, with a note of what happened. The school's published numbers are on the same screen.
Announcements	Announcements	Everything addressed to students.
My QR ID	My School ID	The school ID card, on the phone and printable.

Button	Opens	What you can do there
Profile	Profile	As section 3.2.

12. Parent Portal

One account can be linked to several children. The dashboard is the list of them; an unresolved emergency alert about any of them is shown as a banner across the top rather than behind an icon, because a push notification can be missed.

Button	Opens	What you can do there
A child's card	Child detail	Opens that child, with four tabs.
Attendance tab	Child detail	Every day the child was scanned, and whether it was on time.
Timetable tab	Child detail	Where the child is meant to be, hour by hour.
Grades tab	Child detail	Marks as the teacher submitted them, per subject and term.
Statement of Account tab	Child detail	Charges, payments and the running balance - read only. Refunds are a school action and the button is never rendered here.
Pay online	Pay Online	Send the fee and submit the reference for review. See section 15.
Emergency Alerts	Emergency Alerts	Alerts raised about their own children, with the numbers to call.
Announcements	Announcements	Everything the school addressed to parents.
My Activity	My Activity History	What this account has done in the system.
Profile	Profile	As section 3.2.

A parent linked to two children sees exactly those two. The query that resolves "my children" is filtered per record by the database, so an unlinked student cannot appear even by accident.

13. Attendance in detail

Every person in the school carries a QR ID. Staff-facing roles carry a scanner. The scan decides the rest.

Control	Opens	What happens
My QR ID / My e-ID	My School ID	A card layout with the school logo behind it, the holder's photo, and the principal and director signatures from Branding. Print it, or present it from the screen.
Print ID	Print dialog	Produces the card as a printable document.
Scan Attendance	Scan Attendance QR	Opens the camera. Point it at a code and the record is written; the screen confirms who was marked and offers Scan Next.
Second scan	Scan Attendance QR	A later scan of the same person on the same day is a time-out. A second tap within a few minutes is not - that is the queue at the gate, and the scanner says the person is already in rather than signing them straight back out. A scan after a time-out is reported as already completed.

13.1 Why present or late is decided on the server

Whether a scan counts as present or late is compared against the school's configured cutoff time in the school's own timezone, on the server. It is never computed on the scanning device, so a phone with a wrong - or deliberately changed - clock cannot mark itself on time.

13.2 Who can see attendance

- The person themselves, on My Attendance.
- A linked parent, on the child's attendance tab.
- Staff roles allowed to, within their division scope.
- Nobody can write an attendance record from an app at all - only a scan creates one.

13.3 Attendance per subject

The gate scan answers "did they come to school". It cannot answer "were they in Physics", which is the question behind a grade that dropped and the one a parent asks that nobody could previously answer. So each timetabled class has a register of its own.

Control	Where	What it does
Class Attendance	My classes today	The teacher's day, in order, with each class either not started, in progress or finished.
Time in	The register	Starts the class. Everybody in the section appears, marked present.
P / L / A / E	The register	Present, late, absent, excused - one tap per exception. Three absences is three taps, not forty.
Time out	The register	Ends the class. The finish time is recorded against everyone who was there.
Subject Attendance	Student and Parent	The same records from the family's side, grouped by subject with a rate for each - worst subject first.

- Pressing Time in twice opens the same register, not a second one.
- A class not on today's timetable cannot be started, so a day's marks cannot be filed under the wrong date.
- A register can be corrected on the day it was taken, and not afterwards. After that it is the registrar's to amend.
- A student marked late is recorded as arriving when the teacher marked them, not when the class started - which is the only record there is of when they came through the door. Corrected back to present, they are on the bell again.
- An excused lesson still counts as a lesson missed in the rate. A school that dropped them would report a child who missed half a term with a note as having a perfect record.

14. Fees, assessments and payments

14.1 Fee Schedules

Control	Where	What it does
New schedule	Fee Schedules	A schedule name, the division it applies to, an optional grade or year level, and the school year.
Add fee	Fee Schedules	A line with a label and an amount - tuition, miscellaneous, books, whatever the school charges. As many lines as needed; the total is shown as you build it.
Offered when assessing	Fee Schedules	Whether this schedule appears in the cashier's list when charging a student.
Save schedule	Fee Schedules	Writes it. Existing assessments are not changed by editing a schedule afterwards.

14.2 Assessing a student

Control	Where	What it does
Fee schedule	Assess Fees	Pick a defined schedule, or choose the ad-hoc option and type the fees line by line.
School year	Assess Fees	Defaults from Branding.
Add fee	Assess Fees	Adds or edits a line before anything is committed.
Charge	Confirmation	Shows the total and asks before writing. The charge is what moves the student's balance up.
Void	Confirmation	Reverses an assessment that should not have been made. The voided assessment stays visible - a family's account is never quietly rewritten.

14.3 Taking a payment

Opened from a student's record, the student is already chosen. Opened on its own, the ID is typed - and it has to name somebody before anything is sent.

Control	Where	What it does
Student ID	Record Payment	Either the record's ID or the number printed on the ID card, because the number is what a cashier reads off the card in front of them.
The student banner	Record Payment	The name, class and current balance of whoever the ID resolved to - the check that this is the right record, and the figure that proves the deduction afterwards.
Record Payment	Record Payment	Stays disabled until the ID names a student. A payment that cannot name who it is for is not sent.
Amount	Record Payment	What was handed over.
Purpose	Record Payment	What it is for.
Payment Method	Record Payment	Cash, GCash or bank transfer.
Reference Number	Record Payment	The transaction reference, where there is one.
Receipt	Receipt	A sequential receipt number generated on the server, with the date, purpose, reference and who collected it. Two cashiers taking money at the same moment cannot be issued the same number.
Refund	Confirmation	Reverses a payment. The Admin only, enforced on the server whatever the screen shows - deliberately not the Registrar who collects, because one account that can both take money and give it back is a control nobody is exercising.

14.4 The balance

The balance is owned by the server. It moves only inside the same operation that records a payment, a refund or an assessment - there is no path by which an app can simply write a new figure. The breakdown shown to families and to the cashier lists what was charged, what was paid, and what remains, so a balance is never a number nobody can explain.

A refund is stored as its own row with a negative amount against the original payment, and the original is marked refunded. Both rows stay in the history.

Two cashiers at one counter cannot lose a payment between them. Every balance change is read and written inside one transaction, so two collections at the same moment cannot both start from the same figure - the second is retried against the first rather than landing on top of it. Worth saying because the failure it prevents is invisible: a payment banked, receipted, and simply absent from the balance.

15. Online payments

No payment gateway to sign up for and no percentage taken. The school publishes its own account, the family pays through their own app, and a person at the school approves what comes in.

Control	Where	What it does
Account name	Online Payment Setup	The name families will see on their transfer screen.
Account / mobile number	Online Payment Setup	Where to send it.
QR image	Online Payment Setup	The school's own payment QR, uploaded so families can scan rather than type.
Instructions for families	Online Payment Setup	The text they read before sending anything.
Pay online	Pay Online	The family's side: the account details and QR, then the reference number, the amount sent, the method and the purpose.
Awaiting review	Online Payments	The cashier's queue of everything submitted and not yet decided.
Approve	Online Payments	Turns the submission into a real payment with a receipt number, and moves the balance.
Reject	Online Payments	Refuses it, and the family is told.

A new submission raises an alert wherever the cashier happens to be in the app, not only on the review screen.

15.1 Paying by bank transfer

A school that banks with more than one bank publishes each account - the bank, the account name, the number and the branch. The family chooses which one they sent it to, and that choice is recorded on the submission.

Control	Where	What it does
Add bank account	Online Payment Setup	A bank, an account name, a number, and a branch if the school banks at more than one.
Stop offering this	Online Payment Setup	Closes an account. It stays on file, because older submissions point at it; it is simply no longer offered.

Control	Where	What it does
Bank Transfer	Pay Online	Offered only when the school has published at least one open account. The family picks which one and the details are on screen to copy.
Sent to	Online Payments	Which account the family says they used, beside the reference number - so the cashier knows which statement to check.

A cashier holding a reference number and three bank statements has to know where to look. That is the whole reason the destination is recorded.

16. Records and forms

The two documents a school is asked for most, generated from the records already held rather than copied out by hand.

Control	Where	What it does
Transcript of Records	Records & Forms	The student's academic record, laid out on the school's own letterhead - logo, printed name, address, school year, and the principal and director signatures from Branding.
Form 137	Records & Forms	The DepEd permanent record form, with the fields that form carries.
Purpose	Records & Forms	Why the document is being released.
Released to	Records & Forms	The person receiving it, and their relationship to the student.
Remarks	Records & Forms	Anything else worth recording at the moment of release.
Release & print	Print dialog	Produces the document and writes the release to the history in the same action.
Print again	Print dialog	A reprint, recorded as a reprint, so the count of copies in circulation stays honest.
Copies / history	Records & Forms	Every release of this document for this student, with its date, purpose, recipient and who released it.

When the receiving school writes back years later asking when Form 137 was sent and to whom, the answer is on the screen.

17. The class schedule

Control	Where	What it does
Add class	Schedule editor	Subject, section, teacher, room, day, start time and end time.
Starts / Ends	Schedule editor	Times are read the way people type them - 7:30 AM, 7:30am, 07:30, 0730 are all understood.
Semester or term	Schedule editor	Optional. Leave it blank and the class runs all year, which is what a Grade 7 timetable does. Name it - 1st Semester, 2nd Semester, whatever the school calls it - and the class belongs to that term only.
Save	Schedule editor	Refused if it clashes: two classes in the same room, the same teacher in two places, or one section double-booked. The conflict is named, and names the term it is in. The same check runs again on the server before anything is written.
Remove	Confirmation	Deletes a block from the week.
Section filter	Class Schedule	The week for one section.
Term	Class Schedule	Which term of the year to read. Only shown when the school actually has terms. A term shows its own classes plus the ones that run all year, because that is the week as it actually runs.
Print	Print dialog	The week as a wall-chart grid, matching what is on screen, term and all. Where the section or the teacher is the same all the way down a column, it is printed once rather than in every cell.

17.1 The same blocks, four ways

- Admin and Director see the whole school's week, section by section.
- A Principal sees their division.
- A teacher sees their own week, on My Schedule.
- A student sees theirs, and a parent sees their child's.

17.2 Schools that change timetable halfway through the year

Senior High runs two semesters, and so does a college division. The second semester routinely reuses the same room, the same lecturer and the same slot as the first - and

that is not a double booking, because the two are never in the same week. Name the term on each class and the app treats them that way. A class with no term named runs all year, so it still blocks the slot in every term: a Grade 7 homeroom really is in that room in both semesters.

A school with one timetable for the whole year is never asked about any of this. The field is optional and the term chooser does not appear at all until a term is named.

18. Reports

Report or control	Where	What it gives you
Enrollment by Division	Reports	Head count by division and grade level, every status shown - not only the enrolled ones. The date range does not apply: this is a head count, not a period figure.
Collections and Receivables	Reports	What was charged, what came in, and what is still owed over the chosen period.
Attendance Rate by Section	Reports	Present, late and absent by section, with the rate. Excused days sit outside the rate rather than counting against it.
Grade Distribution by Subject	Reports	Marks banded against the DepEd descriptors, per subject.
This school year / This month / Last 30 days	Reports	The period the report covers. The school year runs June to March.
Export to Excel	File save	The same table as a spreadsheet.
Print	Print dialog	A PDF with the school's heading and the totals row shaded.

19. Emergency

Control	Where	What it does
Emergency (student)	Emergency	One button, with a note of what happened. Sending it notifies the student's class adviser, guidance, the office and their linked parents - at once, and at high priority.
Emergency Alerts (staff)	Emergency Alerts	Live alerts raised in the school. Faculty, Guidance, Principal, Admin and the Director can see them, and any of them can resolve one.
Acknowledge	Emergency Alerts	Says somebody is on their way. Recorded with who and when, and written once - if two people tap it, the first is the one who picked it up.
Resolve	Emergency Alerts	Closes an alert with a note of what happened, recorded with who resolved it and when. Also written once.
Emergency Alerts (parent)	Emergency Alerts	Alerts about their own children, with the numbers to call. An unresolved one also appears as a banner on the parent dashboard.
Emergency Numbers	Emergency Numbers	The school's published list - clinic, guard, barangay, hospital - each with who answers, the number, a note and its position in the list. One tap dials.
Add number	Emergency Numbers	The Admin publishes and reorders the list. Everyone in the school reads it.

19.1 Who is told, and why it is not just the adviser

The class adviser knows the child and is usually nearest to them, so they are told first. They are not told alone. A section with no adviser set, an adviser who has left, or a section name typed a shade differently on the teacher's assignment than on the student record, and an alert that named only the adviser would reach nobody in the building at all. So guidance and the office are told every time as well. Over-telling is the right failure for the one message somebody may be in danger behind.

Where the student was, if their phone could say, is captured at the moment the button is pressed and never afterwards - this is where they called for help from, not a track of where they went. Asking for it never delays the alert: after eight seconds the alert goes without it, carrying a note of why there is no position rather than a blank.

20. Importing and exporting

A school changing systems has years of data in spreadsheets. Five lists can be moved in and out without retyping.

List	Where	What moves
Students	Student Records	The roster, with divisions, sections and guardian details.
Employees	Employee Management	Staff with department, position and division scope.
Grades	Grade Submission	A term's marks, per subject and section.
Expenses	Expenses	School spending, by category and date, with the receipt attached to the row.
Teacher assignments	Teacher Assignment	Who teaches what, to whom, this school year.

20.1 The controls, on every one of them

Control	Where	What it does
Export	Export / Import sheet	Downloads the current list as .xlsx.
Export as CSV instead	Export / Import sheet	The same data in plain CSV.
Download blank template (.xlsx)	Export / Import sheet	The exact column shape the import expects - so there is no guessing, and no phone call about which columns are needed.
Choose an Excel or CSV file	Preview	Reads the file and shows what it found before writing anything. Rows it cannot read are reported rather than silently skipped.

21. Announcements and notifications

Control	Where	What it does
Title and Message	Announcements	What is being said.
Everyone / Choose roles	Announcements	Who it is addressed to. Choosing roles means only those roles see it - and only their phones ring.
Post to a class	Announcements	A teacher addresses one of their own sections instead of a role. It reaches that class's students, their parents and the section's other teachers - three different roles and one class - and nobody else.
Pin to top	Announcements	Keeps one announcement at the top of the list for everyone who can see it.
Announcements on this device	Profile	The reader's own switch for push notifications on that phone or computer.

21.1 How a notification reaches a phone

Posting an announcement resolves its audience on the server, finds the active accounts the notice is addressed to, and sends to the devices those accounts have registered. It arrives with the app closed. The app is installable to a home screen as a progressive web app, which is what makes this work on a phone without an app store install.

A notice addressed to a class is resolved the same four ways a class is made up of people: the students in that section, the parents of those students, and the teachers assigned to it. Section names are matched however they were typed, because they are entered by hand on the student record and again on the teacher's assignment, and an exact comparison fails in the direction where a family simply never hears.

Who a list shows and whose phone rings are decided by two separate pieces of code, kept deliberately apart and covered by the same table of test cases - so a change to one cannot quietly disagree with the other.

21.2 The notification inbox

A push notification is gone the moment it is swiped away, and never arrives at all for a phone that was off or a browser that never granted permission. So everything the school sends is also written to the person's own inbox, reached from the bell in every portal's top bar and still there tomorrow.

Control	Where	What it does
Bell	Every portal	Carries the count of what has not been read.

Control	Where	What it does
Notifications	The inbox	Everything sent to this person, newest first, with what it was about.
Turn on notifications	The inbox	Where permission is asked - on the screen somebody opened to look at notifications, not as a prompt in front of somebody checking a grade.
Mark all read	The inbox	Clears the count.

21.3 What raises one

What happened	Who is told
An announcement	Everyone it is addressed to - a role, or a class and its families
A guidance summons	The student and every linked parent - and again if it is cancelled
An emergency alert	The class adviser and the student's parents
A leave decision	The employee who filed it
A message	The other person in the conversation

A summons has always been visible to the family. Visible is not told, and a summons is the one record with a date it is no use learning about afterwards - so it is now sent, and sent again if the office calls it off. A family that rearranged a working day around an appointment should not turn up to one that is off.

22. Parent and teacher messaging

A parent and one of their child's teachers can message each other in the app. One thread per teacher, per parent, per child - so a parent with two children taught by the same teacher has two threads, and neither side has to say which child they mean.

22.1 Who can message whom

A parent may write to a teacher when that teacher teaches their child. The school does not configure this and nobody maintains a list: it is worked out from the timetable assignments, the student's section and the parent's linked children, every time a thread is opened.

Who	May write to
Parent	Any teacher assigned to their child's class. The class adviser is offered first.
Teacher	The linked guardians of any student in a class they teach.
Everybody else	Nobody. Messaging is between a family and the teacher who teaches their child.

22.2 Who can read it

Only the two people in it. Not the Principal, not the Director, not an administrator. This is deliberate: a parent who believes the office is reading tells the teacher nothing worth reading, and a channel nobody trusts is a channel nobody uses. A school that needs to see a conversation has a lawful-request route and an audit trail; what it does not have is a login that quietly opens every private message in the school.

The audit trail holds to the same line. It records that a conversation was written to, by whom and when, and says on the entry that it withheld the content - it does not copy the message in. A log the office reads school-wide would otherwise be the back door this section says does not exist.

22.3 What is fixed and what is not

- A message cannot be edited, and cannot be unsent. It is the record of what was said.
- The sender is stamped by the server, so nobody can post in the other person's name.
- Each side clears only its own unread count - marking your own as read does not clear theirs.
- Every message raises a notification for the other person, naming the child it is about.

Announcements remain the way to tell a whole class or a whole school something. Messaging is for one family and one teacher.

23. Staff time and leave

The QR scanner has always been able to scan an employee in and out. This is where those scans are read back as a month, together with the leave the office approved - which is the piece that turns a blank day from an unexplained absence into an authorised one.

23.1 Filing leave

Any employee files from My Leave: the kind of leave, the dates, and why. The system counts the working days for them, weekends excluded, and stores that count so a request keeps the number it was approved on. A request can be withdrawn while it is still undecided, and not after.

23.2 Deciding it

Director, Principal and Admin all see every request in one queue, with the decided ones beneath it - knowing who is off is part of running a school. The Admin decides them. A decision records who made it, in what role, when, and any remarks, and the employee is notified. A request that has already been decided cannot be decided again.

23.3 The timesheet

A month, per employee, for the office - and their own for every employee. Each day is named as exactly one thing:

Reads as	When
Worked / Late	There is a scan. Late still counts as present.
On leave	An approved request covers the day. A pending one does not.
Rest day	Saturday or Sunday by default, configurable for schools that teach on Saturdays.
Absent	A working day with no scan and no approved leave.

- A scan beats leave: somebody who came in on their approved leave day was at work.
- A day with a time in and no time out contributes no hours at all, and the sheet says how many such days there are. Nothing is guessed onto a payslip.
- Totals: days worked, hours, lates, days on leave, days absent.

This is the sheet payroll is run from. The run itself is section 33.

24. Signing in when you cannot

Two routes back into an account, because the people who need one do not all have the same things.

Route	What happens
Reset by email	A link is emailed to the address on the account.
Reset by phone	A code is texted to the mobile number on the account. The person then chooses a new password.

The phone route exists because a family whose only device is the handset in their pocket often has no email they can reach - and the account they cannot get into is frequently the one the school emailed the invitation to.

24.1 What it will not do

- It will not recover an account when the number is registered to more than one - a parent who also works at the school, or a household sharing a handset. It says so and asks them to contact the office.
- It will not recover a suspended or closed account.
- It signs out every other session on the account, because somebody recovering an account is often doing it because somebody else has it.

This is only as good as the mobile numbers on your records. A school that never filled the field in has given its families a route that finds nothing.

25. Security

Every rule below is enforced where the data lives rather than in the app, so it holds even for a request that never went through the app at all.

25.1 One school cannot see another

Every record lives under its own school, and every account carries the school it belongs to. There is no query that crosses that line, for any role.

25.2 Divisions hold too

A Principal, Registrar, Faculty member or Guidance counsellor can be scoped to Elementary, Junior High, Senior High or College - and, for College, to a department. A Junior High teacher scoped to their division cannot open a Senior High record: the read is denied, not filtered out of a list.

25.3 Fields the app can never write

Field or record	Written by	Why
balance	Only a recorded payment, refund or assessment	A balance that could be typed is a balance nobody can trust.
studentNumber	Only registration	A permanent identifier, issued once.
role, status, schoolId	Only the dedicated actions that audit them	A role change is a security event and is recorded as one.
attendance	Only a scan	Cross-user writes are not something a client should be trusted with.
receipt numbers	Only the server	Two cashiers at once must not be able to issue the same number.

25.4 Everything is written down

Every create, edit and delete in the school lands in the audit trail with who did it and when, and it is recorded automatically rather than because a screen remembered to log it. The Director and Admin read the whole trail, filtered by module and date range; every account can read its own.

The trail never carries content its own readers could not otherwise read. Parent-teacher conversations are recorded as having changed, not quoted, and the entry says so. A log read school-wide must not become a way around the rules on what it is logging.

26. Data Privacy Act

Schools hold minors' records. These are the questions a Data Protection Officer asks, and where the answer lives in the system.

What a DPO asks for	Where it is	What it contains
A privacy notice	In the app	Eight categories of data: what is held, why it is held, and who sees it. Plus the rights the Act names, the retention position, and how the school secures and shares data.
A recorded acknowledgement	First sign-in	Every account reads the notice before their first use, and the version they read is stored against the account.
A retention schedule	Shipped with the system	How long each kind of record is kept, written down.
A Data Processing Agreement	Shipped with the system	A template ready for the school's DPO to review.
Access enforced at the database	Throughout	Who can read what is decided where the data lives, not by what a screen shows - so a screen a role cannot reach is also data it cannot fetch.
An audit trail	Audit Trail	Every change to a record carries the account that made it and when.

Requests from families - access, correction, erasure, objection - are answered by the school office, not tracked in this system. The rights are the school's to honour under the Act; this software holds the records the office needs to answer them, and the privacy notice tells families where to ask. A school that wants the queue inside the app should say so before signing: it is a build, not a setting.

27. Where it runs

Platform	How it is delivered	Notes
Android	An APK the school distributes	Camera scanning and push notifications, on the phones staff already carry. No app store account is needed on the school side.
Windows	A desktop build	For the registrar's and cashier's counter, where the printing and the typing happen.
Web	Any browser	Installable to the home screen as a progressive web app, including on iPhone once added to the Home Screen.

It is one codebase and three builds, not three products - so a fix reaches the registrar's desktop and the parent's phone together, and there is no separate teacher app or parent app to keep in step.

28. Going live

A readiness check the school can run itself, from the Director or Admin portal, before the first school day. Nothing runs until it is asked to, and nothing it does changes the school's data.

Check	Result type	What it proves
Database reachable	Pass	A real read from the school's own records returns.
Security rules deployed	Pass	A write the rules must refuse is refused. This is the check that matters most: a database left in test mode behaves perfectly right up to the day one school reads another's records.
Cloud Functions deployed	Pass	Every server action answers, in the right region.
Database indexes created	Pass	The queries the app depends on actually run.
File storage writable	Pass	A probe file is written and removed again.
Account claims set	Pass	The signed-in account carries its role and its school.
School details filled in	Warning	Name, logo, school year and principal. A warning rather than a failure - the system works without them, the printed documents just look unfinished.

Every failure names its remedy. A check that cannot say what to do about it is not a check, it is an alarm.

29. Admissions

The pipeline in front of enrolment: an enquiry becomes an applicant, an applicant becomes a student. Opened from the Registrar portal, and the screen opens on the enquiries nobody has moved in a week, longest wait first - because that list is the one a school loses a year to.

29.1 The seven stages

Stage	Means	What it needs
Enquiry	Somebody asked	Name, contact number, the grade level applied for, and where the family heard about the school.
Applied	The form is in	With the documents the school asked for listed against the record.
Exam scheduled	A date is set	And the family is told it.
Exam taken	A score exists	Without a score the stage will not move. The app will not record an exam as taken because somebody expects it to have been.
Offered	A place is offered	With the date the offer lapses.
Reserved	A fee is paid	The reservation fee follows the child and lands as a credit on their ledger once they enrol.
Enrolled	A student exists	One server transaction creates the student record and issues the student number.

29.2 The buttons

Control	Opens	What happens
New Enquiry	Applicant form	Name, contact, grade level applied for, source, and any remarks.
Advance	Stage picker	Offers only the stages that legally follow this one: one step on, one step back, or out. There is no free choice of stage.
Decline / Withdraw	Applicant	Ends the pipeline for this family, with a reason. Neither counts as a stage reached.

Control	Opens	What happens
Enrol	Confirmation	Available only from Reserved. Creates the student, issues the number, and posts the reservation fee as a credit.
Follow-up list	Applicants	Every open applicant nobody has touched in a week, oldest wait first.
Funnel	Admission funnel	How many reached each stage this year, and where the drop-off is.

A stage cannot be wished forward. No score, no "exam taken"; no payment, no "reserved". The evidence is what moves the record, which is the only reason the funnel means anything.

30. Grading and the report card

Grades are weighted the way DepEd Order 8 s.2015 describes: written work, performance tasks and quarterly assessment, weighted differently per subject group, then transmuted for the report card.

30.1 The grading scheme

Control	Where	What happens
Grading Scheme	Admin portal	The weights per subject group, and the transmutation table. Shipped seeded with the Order 8 groupings as a starting point - not as an answer.
Edit weights	Grading Scheme	Change any weight. The three components of a group must total 100.
Confirm	Grading Scheme	A named person at the school states that these weights match the order current for them, and that name is stored.
Any edit	Grading Scheme	Revokes the confirmation. A changed scheme has to be confirmed again before anything prints.

30.2 How a quarterly grade is computed

- Each score is a raw mark out of a maximum, filed under one of the three components.
- A component with no work in it yet is left out of the arithmetic entirely - it is not a zero.
- The grade is the earned total rescaled over the weight that actually exists, and the screen names which component is still missing.
- That is the difference between "no exam has been given yet" and "every child in the school is capped at 80 until it has".

30.3 The report card

Control	Opens	What happens
Submit Grades	Faculty portal	Enter marks by hand, or import a spreadsheet. The class record shows the arithmetic behind every grade.
Print Form 138	Report card	Every subject, every quarter, the final grade, the DepEd descriptor and the remarks - on the school's own letterhead.

Control	Opens	What happens
Unconfirmed scheme	Refusal	The report card will not print at all until somebody at the school has confirmed the weights. This is deliberate.

The weights are the school's, not ours. We seed them so nobody starts from a blank table, and then we refuse to print anything until a named person has checked them.

31. Instalments, discounts and vouchers

Section 14 covers charging a fee and taking a payment. This section covers the four things a Philippine private school then does to that bill - and none of them is a remark typed into a notes field.

31.1 Instalments

Control	Opens	What happens
Billing Schedule	Fee schedule	Split a schedule into parts - upon enrolment, then monthly - each with its own amount and due date.
Due dates	Statement	What is overdue becomes a date the family and the cashier can both read, rather than an opinion at a counter.

31.2 Discounts

Control	Opens	What happens
Grant Discount	Discount	Kind - sibling, early bird, staff child, scholarship - amount or percentage, the charge it applies to, and the authority it was granted on.
Revoke	Discount	Ends it. The original grant and the revocation both stay on the record.

31.3 ESC and SHS vouchers

A voucher is a subsidy owed to the school by PEAC, not a discount the school gave away. It is carried as a receivable: the family sees the net they owe, and the school still sees what is outstanding from the programme. A school that books a voucher as a discount cannot say what PEAC still owes it.

31.4 The exam permit

Cleared or not cleared, read from the ledger, so nobody is deciding at a desk on exam morning whether this family is up to date. A promissory note recorded against the account is what clears a student the school has decided to let sit.

32. Official receipts

The BIR register a school keeps by hand in a booklet, kept in the app instead - with the one property a paper booklet has for free and software usually loses: a serial is issued exactly once.

Control	Opens	What happens
Register Booklet	OR booklet	The Authority to Print number, the serial range it covers, and the date it was received.
Issue OR	Official receipt	Claims the next serial from the open booklet, on the server, inside a transaction. Two cashiers pressing at the same moment are handed different numbers - never the same one.
Print	Official receipt	Payer, amount, what it was for, and the serial, on the school's own letterhead.
Cancel	Official receipt	Marks a serial cancelled. It is never re-issued to somebody else.
Reconcile	OR register	Which serials were issued, which were cancelled, and which are simply missing - the question an audit opens with.

The serial is not a number the app displays. It is a number the server gives out once and can never give out again.

33. Payroll

The timesheet in section 23 is the input. This is the run: a period, a set of employees, and a payslip each.

33.1 Setting it up

Control	Opens	What happens
Compensation	Employee	Basis - monthly, daily or hourly - the rate, and any allowances. Set by the Admin and readable by the Director and the Admin only, enforced by the database.
Contribution Scheme	Payroll Setup	The SSS, PhilHealth, Pag-IBIG and withholding brackets. It ships EMPTY.
Confirm	Payroll Setup	A named person states that these brackets came from the circular in front of them, names that circular, and confirms. No payslip prints until they have.

33.2 The run

- Days worked, late and absent come from the month already on the timesheet - nothing is retyped.
- An absence is costed at the period's own day rate, not a fixed twenty-two, so February does not pay differently from March.
- Contributions are deducted first, and tax is computed on what is left.
- Net pay never falls below zero.
- 13th month is a twelfth of what was actually earned across the year, taken from the runs rather than from a headline salary.

33.3 The payslip

Control	Opens	What happens
Print Payslips	Payslip	A5, two to a sheet, your school logo printed faintly behind the figures, and the basis of every line on it - so an employee can check their own pay without asking anybody.
My Payslips	Own payslips	An employee can read their own, and nobody else's. Payslips are written by the server and cannot be edited afterwards: a correction is a new payslip.

Every figure on a payslip is computed on the server, from the pay rates, contribution tables, gate scans and approved leave already on file. The device that presses Issue supplies the month and nothing else, so what your office approved on screen and what went into the record are the same calculation rather than two that have to agree.

We ship no contribution tables. Rates move most years, a wrong bracket looks entirely plausible on a payslip, and the result is somebody short every payday or handed a bill in December. Your school types them from the circular, records which circular that was, and confirms - and that name prints beside the deduction.

34. Inventory

The stock room, as a ledger. Every movement is a row, and the quantity on hand is what those rows add up to - it is never a number somebody typed.

Control	Opens	What happens
Add Item	Item	Name, category, unit, reorder level, and where in the school it is kept.
Receive	Movement	A delivery, with the supplier and the document number against it.
Issue	Movement	To a named person, for a reason. The projector has a name against it from the moment it leaves the room.
Return	Movement	Back on the shelf, and the person who had it is clear.
Consume / Write off	Movement	Used up, or damaged and gone. Both are movements, so both are explained.
Low Stock	Report	What has fallen to its reorder level, before somebody needs it.
Outstanding	Report	What is out of the room right now, and who is holding each of it.

The movement and the new quantity are written in one transaction, and each movement stores the quantity before and after it. A count that looks wrong has a history that explains it.

35. Year-end rollover

The week every April that a school currently does by hand, on a printed list, in a room. Run from the Registrar portal, one decision per student, against the final grades already held.

Decision	Effect	What it means
Promoted	Next grade level	Taken from the school's own roster of levels. Where there is no next level, the app says so rather than inventing one.
Retained	Same grade level	With a reason recorded where the school needs one.
Graduated	Exit	For students in the last level of a division, read off the roster rather than hard-coded.
Transferred out	Exit	The record stays; the student does not roll forward.
Held	Nothing	The default. A student the school has not decided on is left out of the run entirely.

- Silence never becomes a promotion: held students are excluded from the run, not defaulted through it.
- A student already rolled over is skipped rather than moved twice, so the run is safe to repeat.
- The run reports how many were applied and how many were already done.
- A promotion record is written once and never edited. A correction is a new record.

36. The live demo

Everything in this guide can be clicked through at logicclass.vercel.app, with no sign-up, no install, and no Firebase project behind it.

- An account for every portal. The round button at the bottom left switches between them and names, under each, the one screen worth opening.
- The data is in memory. Nothing typed into it is kept, and reloading the page puts it all back.
- Every screen there is the real application. The demo swaps the database underneath it and nothing else.

A demo that hides behind a booking form is a demo somebody has decided you should not see. Hand a principal the laptop and stop talking.
